

CENTRAL UNIVERSITY OF RAJASTHAN

RECENT THEORIES IN LINGUISTICS AND THEIR APPLICATION

March 17th - 18th, 2021

About the Symposium

The Symposium aims to promote understanding of human language from both formal and functional perspectives in Linguistics with reference to recent and contemporary discoveries and developments in the realm of Language sciences and allied branches. It would attempt to venture linguistics and language sciences beyond the classroom, its expansion and application in the real-world language related phenomena. It would provide an inter-disciplinary platform for researchers, practitioners and educators to discuss the most recent innovations, trends and concerns as well as practical challenges encountered and solutions adopted in the fields of linguistics and language sciences. Topics of discussions would range from introductory notes to research frontiers on aspects of linguistics and language sciences and includes:

- Formal and Generative approaches to Language
- Experimental Phonetics and Phonological Theories
- Loan word Phonology and motivations
- Syntax Semantic interface
- Cognitive and psycholinguistic studies
- Language variation and Social correlates
- Discourse analysis and Language variation
- Linguistic Rights and Linguistic Imperialism
- Computational linguistics and Artificial Intelligence

About the University

Central University of Rajasthan (CURAJ) was established by an Act of Parliament as a Central University in 2009. CURAJ is committed to endure quality in all the dimensions of higher education viz. teaching, learning, research, extension and governance adhering to regional and global needs. The University is one of India's leading universities accredited with 'A' grade by NAAC and 34 NIRF rank of 2016.

About the Department

The Department of Linguistics was established in the academic session 2019-20 in CURAJ under the School of Humanities and Languages. The department offers a 5-year Integrated M.Sc. Programme in Linguistics and Language Sciences. The programme is designed to combine linguistics, the scientific study of language with technological strategies and logic building skills, developing an understanding of cross-disciplinary research. It dives into details such as the human brain subconsciously paying attention to language structure and simultaneously develops an understanding of the underlying patterns in a set of language data. In recent years, there have been notable theoretical and methodological developments in this field accompanied by technical advancement. This has led to sophisticated methodological development in cognitive and psycholinguistic studies, computational linguistics, corpus and quantitative linguistic studies and many more. Linguistics is interdisciplinary science and the department is actively promoting understanding of linguistics and language sciences.
